

Continental Introduces New Branded Products At Farm Progress Show For North American Markets

Continental is introducing two new products and an agriculture tire with improved V-ply technology at the 2015 Farm Progress Show.

The new branded products include Continental's Trackman RowTech, as well as high-performance air springs and a General tire for agriculture equipment.

Continental's Trackman RowTech is designed specifically for Case Rowtrac and New Holland Smart Traxx machines. "Trackman RowTech withstands the toughest conditions to allow more time in the field and generate a higher yield," said Rob Schultz, marketing manager for Continental's rubber track products. "This new offering provides 70 percent more tread rubber than the current design."

"New product developments with high-performance air springs from ContiTech are dramatically extending the life of agriculture equipment," said Doug Duesing, manager of air springs industrial marketing. "Many types of agricultural machinery are increasingly being fitted with air springs, or air bags, to ease the ride comfort and to protect the equipment from the effects of the uneven off-road surface conditions."

Under General tire, Continental also is exhibiting its new V-ply technology agriculture tire with low rolling resistance, high tread cut resistance, excellent traction and high mileage.

For additional information on these applications, visit the Continental Trackman Booth No. 217 at the Farm Progress Show.
